TEST	RESULT	UNITS	Biological Reference Interval
------	--------	-------	-------------------------------

Orbito Flu Panel (1486)
(Method: RT-PCR)

Specimen	NASOPHARYNGEAL SWAB		
Influenza A	NOT DETECTED		
H1N1	NOT DETECTED		
H3N2	NOT DETECTED		
Influenza B	NOT DETECTED		

REMARKS

- Influenza A virus:** Influenza A virus infection is associated with acute respiratory infections of varying severity, ranging from asymptomatic to fatal disease. Typical influenza symptoms include fever, sore throat, cough, headache and myalgia. Complications include primary influenza viral pneumonitis, bacterial pneumonia and exacerbation of underlying chronic conditions. Illness tends to be most severe in the elderly, in infants, young children, and immunocompromised host.
- Influenza A virus H1N1:** Influenza A virus H1N1 commonly known as swine flu, is primarily caused by the H1N1 strain of the flu (influenza) virus. H1N1 is a type of influenza A virus, and H1N1 is one of several flu virus strains that can cause the seasonal flu. The signs and symptoms of flu caused by the H1N1 virus are similar to those of infections caused by other flu strains and can include Fever, but not always, Chills, Cough, Sore throat, Runny or stuffy nose, Watery, red eyes, Body aches, Headache, Fatigue, Diarrhea, Nausea and vomiting.
- Influenza A virus H3N2:** Influenza A virus H3N2 is a subtype of viruses that causes influenza (flu). H3N2 viruses can infect birds and mammals. In birds, humans, and pigs, the virus has mutated into many strains. In years in which H3N2 is the predominant strain, there are more hospitalizations.
- Influenza B virus:** Influenza B virus is a respiratory infection caused by flu viruses. There are three main types of influenza A, B, and C. Types A and B are similar, but influenza B can only pass from human to human.

INTERPRETATION

Inf-A	H1N1	H3N2	Inf-B	Interpretation
Positive	Positive	Negative	Negative	H1N1 RNA Detected
Negative	Negative	Negative	Negative	Not Detected
Positive	Negative	Positive	Negative	H3N2 RNA Detected
Negative	Negative	Negative	Positive	Influenza-B RNA Detected

Disclaimer:

All laboratory test results must be interpreted within the context of overall health of the patient and should be used along with other tests and clinical findings. Laboratory test results may vary depending upon age, sex, time of sample collection, diet, medication and physiological variations.
